

SUMMARY

Computer engineering graduate well versed in all aspects of computers, highlighted by over 8 years in diverse positions and learning opportunities. I have vast experience in IT support, hardware and software solutions. My knowledge and skills involve electronic device components, circuits, computer design, and electronic systems. Extensive expertise in sales and services, ranging from public to private work sectors. Excited to apply my skills and knowledge to new challenges in the field of computer engineering.

SKILLS

Software C → Java → VHDL → Python → TypeScript → Swift → Assembly → SQL → PowerShell
Hardware FPGA → Embedded → Circuits → Electrical Systems → Repair
General Sales → Leadership → Problem Solving → Patience → Personable

EDUCATION

Bachelor of Engineering (B.Eng.), Computer Engineering, University of Guelph 2026

PROJECTS

Robotic Hand Rehabilitation System (CPM Device), Capstone Project 2026

- Led a team to design and build an embedded-controlled, servo-driven CPM system to restore finger range-of-motion for a hand-injury patient, incorporating mechanical linkages and individualized joint-angle limits to ensure safe, repeatable therapy cycles
- Developed a cloud-connected React Native web dashboard backed by Firebase Authentication and Realtime Database, enabling secure user accounts, automatic device data uploads, and live visualization of patient therapy metrics

Real Time PID Controller, μ C/OS-III PID Controller 2025

- Achieved implementation of a real-time PID temperature control system on an STM32 platform using μ C/OS-III, enabling deterministic task scheduling, stable closed-loop control, and safe operation of a hot-air plant
- Developed an embedded user interface with LCD visualization and push-button control to support automatic set-point regulation and manual override with live temperature, voltage, and system state feedback

Subscription Analytics Platform, Cloud-Connected 2024

- Developed a full-stack React Native application with Firebase Authentication and Realtime Database to securely manage user accounts, subscription data, and cross-device synchronization
- Implemented real-time spending dashboards with interactive charts, API-based logo integration, and automated data persistence to provide live financial insights across mobile and web

EXPERIENCE

IT Student Internship Summer 2023, Summer 2024, Summer 2025

- Skyline Group of Companies Guelph
- Enhanced user experience by troubleshooting hardware and software issues for over 500 employees across multiple locations
 - IT support provided through a ticket queue and emergency notice
 - Led electronic inventory management involving charity donations and e-waste recycling

Application Developer Internship Summer 2022

- Skyjack Incorporated Guelph
- Built .NET full stack programs to assist colleagues and administrators
 - Enhanced code by solving bugs and code issues in production applications
 - Handle SQL data for application information storage

Desktop Support Technician Internship Summer 2021

- Linamar Corporation Guelph
- Assisted employees and other companies under the Linamar umbrella with technical issues
 - Built and supported hybrid meeting environments for the company executives
 - Led and managed the technology deployed at Skyjack pop up Covid clinic

CRITICAL COURSES

VLSI Hardware Digital Design: Developed complex digital systems focusing on transistor level design and optimization

Electronic Devices: Configured FPGA boards to implement various digital circuits and systems

Real Time Systems Design: Designed hardware controllers for real world systems such as factories and vehicles
